Newfire Global Partners DevOps as a Service

World-Class DevOps Without the Hassle

Your Solution for Cloud, Infrastructure, and Security

Newfire's DevOps as a Service combines global expertise with 24/7 availability to deliver a full DevOps solution for companies of all sizes. Our DevOps team is available in dedicated, shared-services or hybrid delivery models, providing cross-coverage to ensure that you are never without support.

Great DevOps lets you accelerate deployment of high-quality software and simplify its maintenance. DevOps as a service from Newfire also helps minimize the cost of building and maintaining top-tier infrastructure and of maintaining the coverage your business needs - whether that's eight hours a day or twenty-four.
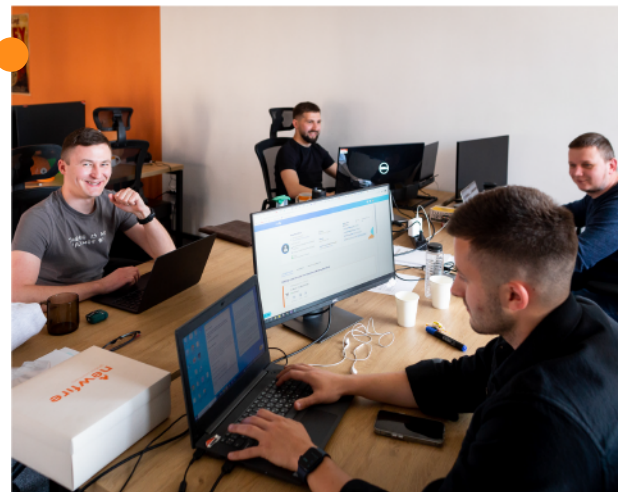

Rely on Newfire's Proven Track Record

Our approach combines years of experience in healthcare technology, fintech, and other industries to ensure your team's success. You will benefit from our experience in supporting dozens of companies through infrastructure audits and complex compliance journeys, covering the spectrum from seed-stage startups to late-stage growth companies. You'll gain access to industry and technology experts and benefit from a proven track record.

A great DevOps practice is not just about deploying code, it's about enhancing collaboration, automating processes, and optimizing your entire infrastructure for agility and scalability. Newfire's DevOps team is always on the job, so your infrastructure receives continuous updates and utilizes cutting-edge technology. We continually review best practices and the latest updates and technologies, helping to guide deployment decisions.

Who Benefits from DevOps as a Service?

Early-Growth Companies & Established Enterprises:

From day one, access a complete package of services, featuring advanced security, compliance, and spend monitoring capabilities. Get access to best-in-class capabilities, sidestepping the learning curve associated with acquiring new technology expertise. Your team gets DevOps support on demand and can deploy code from Day One - and often at a lower cost than a single dedicated DevOps engineer.

Private Equity and Venture Capital:

Leverage Newfire's Advisory Services to review DevOps practices as part of due diligence and implement new processes (or address any documentation backlog). Portfolio companies can adopt Newfire's 24/7 DevOps support model to get started faster, improve forecastability and manage costs efficiently.

DevOps as a Service Focus Areas

Automation:
Automated workflows streamline development, testing, and deployment by eliminating manual tasks. Leveraging Terraform for infrastructure as code and Kubernetes for container orchestration, this approach not only increases efficiency but also reduces the chances of errors, making the software development lifecycle smoother and more reliable.

Project Foundations:
Accelerate development with our turn-key DevOps platforms using AWS and Azure, and benefit from our continuous improvements and ongoing investments in R&D. Additionally, with 24/7 global production support, we ensure seamless operations, enabling faster time-to-market and enhanced productivity for your business.
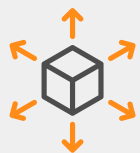

Security & Compliance:
Integrating security practices directly into the DevOps workflow ensures early vulnerability detection and compliance with security standards. Our experts possess extensive experience in software engineering within digital health companies, enabling them to proactively safeguard applications and data from threats.

Monitoring & Performance Optimization:
Aligned with your team and objectives, we are implementing high quality monitoring solutions using Google Cloud's operations suite to continuously track the performance and health of applications and infrastructure. This initiative aims to improve performance and identify potential bottlenecks effectively.

Scalability:
As we work, we always think about scalability, making sure systems are consistent across different environments and can be set up and expanded quickly. Furthermore, our global coverage implies the ability to quickly find and add more experts, extend services, and scale rapidly.

About Newfire

Founded on the principle that true expertise encompasses both technological prowess and an intimate understanding of the social challenges inherent in the US health system, Newfire is led by seasoned executive, product and technology leaders who have had a major impact on the US healthcare industry, providing operational leadership at companies from Series A to IPO.

Newfire has assembled a unique cohort of deeply experienced advisors, including VP and C-executive leaders within major, US-based healthcare systems and technology firms. Our advisors have led technology, product and operations initiatives and have navigated the complex landscape of healthcare delivery.

Headquartered in Cambridge, MA, Newfire's global presence spans Europe, Latin America, and the Asia-Pacific region. Our scale allows us to provide flexible solutions for complex team-building challenges - including complex engineering services, UI and UX development, corporate transformations, interim leadership and accelerated starts for new projects.

We developed our DevOps as a Service Offering to address a common challenge faced by CTOs and engineering leaders - making sure that they have the right support for their engineers and customers at all times, while also making sure that they have the resources to invest in all the other areas that a high-functioning engineering team needs.
